# **1.INTRODUCTION**

## **1.1 PROJECT OVERVIEW**

**Category:** Cloud App Development

**Skills Required:**

IBM Cloud, HTML, Javascript, IBM Cloud Object Storage, Python- Flask, Kubernetes, Docker, IBM DB2, IBM Container Registry

**Project Description:**

In simple words, personal finance entails all the financial decisions and activities that a Finance app makes your life easier by helping you to manage your finances efficiently. A personal finance app will not only help you with budgeting and accounting but also give you helpful insights about money management.

Personal finance applications will ask users to add their expenses and based on their expenses wallet balance will be updated which will be visible to the user. Also, users can get an analysis of their expenditure in graphical forms. They have an option to set a limit for the amount to be used for that particular month if the limit is exceeded the user will be notified with an email alert.

## **1.2 PURPOSE**

In this python Flask project, we will create an expense tracker that will take details of our expenses. While filling the signup form a person will also need to fill in the details about the income and the amount he/she wants to save. Some people earn on a daily basis, so their income can also be added on a regular basis. Details of expenses will be shown in

the form of a pie chart on a weekly, monthly, and yearly basis. Installation of Flask is a must to start with the Personal Expense Tracker Application project.

Personal finance management is an important part of people's lives. However, everyone does not have the knowledge or time to manage their finances in a proper manner. And, even if a person has time and knowledge, they do not bother with tracking their expenses as they find it tedious and time-consuming. Now, you don't have to worry about managing your expenses, as you can get access to an expense tracker that will help in the active management of your finances. Also known as expense manager and money manager, an expense tracker is a software or application that helps to keep an accurate record of your money inflow and outflow. Many people in India live on a fixed income, and they find that towards the end of the month they don't have sufficient money to meet their needs. While this problem can arise due to low salary, invariably it is due to poor money management skills.

## 2.LITERATURE SURVEY

### Literature Survey

AUTHORS	TITTLE	DESCRIPTION	PROS	CONS
Aman Garg, Mukul Goel, Sagar Mittal, Shekhar Singh	Expense Tracker	This is based on that facilitates the user to keep track and manage their personal as well as business expenses on daily bases. Instead of using paper or excel sheet. This application will provide a complete digital solution in a short time.	When you track your Expenses, you are aware about the area where you can save better. Spending carelessly does not give you leeway to save for our future	Due to the ease of being able to approve expense reports instantly at the click of a button, managers and approvers may sometimes be negligent.
Muskaan Sharma, Ayush Bansal, Dr. Raju Ranjan, Shivam Sethi	A Novel Expense Tracker using Statistical analysis	This application based on involves transaction of money will be stored in the system and based on the data stored. This app gives some predictions and reports.	The old method of collecting expenses included printing copies of the paper, attaching receipts, and sending reports to managers who approved them or brought them back to the employee for adjustment. But now, the process has become simple and fast with automated expense management software.	The software simplifies the work of auditors, there is less scope for auditors to investigate suspicious activities.

Dr.V.Geetha,G.Nikhitha, H.Sri Lasya,Dr.C.K. Gomathy	Expenditure Management System	This device can be utilized by any individual to govern their income expenditure from each day to annual basis.	When you bill expenses directly to customers, employee reports must be timely and accurate to maximize cash flow. Expense management software consists of cost tracking.	Poor customer support can be a blocker for your operations when you experience glitches, need to set something up,
Anjali Kumari, Utkarsh Raj, Aman Kumar	D2D Expense Tracker Application,	This application will help the user to outline the own classes for expense sort like food, clothing, rent, bills wherever they need to be spent and can add some information in further to specify the expenses.	Expense management software has a dashboard that collects employee expense data and easily represents it in a visual format using charts and graphics. Manager can see measurements such as how much a company spends on an employee or department, or the average time it takes to approve a cost report.	There may even be cases of internal fraud, because effective may be unfeasible as we mentioned, we can see that a solution that, on first impression, seemed easy and economical, such as expense and mileage claim spreadsheets using Excel.

## 2.1 EXISTING PROBLEM

The problem of current generation population is that they can't remember where all of the money they earned have gone and ultimately have to live while sustaining the little money they have left for their's sential needs. In this time there is no such perfect solution which helps a person to track their daily expenditure easily and efficiently and notify them about the money shortage they have. For doing sot hey have to maintain long ledger's or computer logs to maintain such data and the calculation is done manually by the user, which may generate error leading to losses. Not having a complete tracking.

## 2.3 PROBLEM STATEMENT DEFINITION

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love.

A well-articulated customer problem statement allows you and your team to find the ideal solution for the challenges your customers face. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

<b>I am</b>	Describe customer with 3-4 key characteristics - <i>who are they?</i>	Describe the customer and their attributes here
<b>I'm trying to</b>	List their outcome or "job" the care about - <i>what are they trying to achieve?</i>	List the thing they are trying to achieve here
<b>but</b>	Describe what problems or barriers stand in the way - <i>what bothers them most?</i>	Describe the problems or barriers that get in the way here
<b>because</b>	Enter the "root cause" of why the problem or barrier exists - <i>what needs to be solved?</i>	Describe the reason the problems or barriers exist
<b>which makes me feel</b>	Describe the emotions from the customer's point of view - <i>how does it impact them emotionally?</i>	Describe the emotions the result from experiencing the problems or barriers

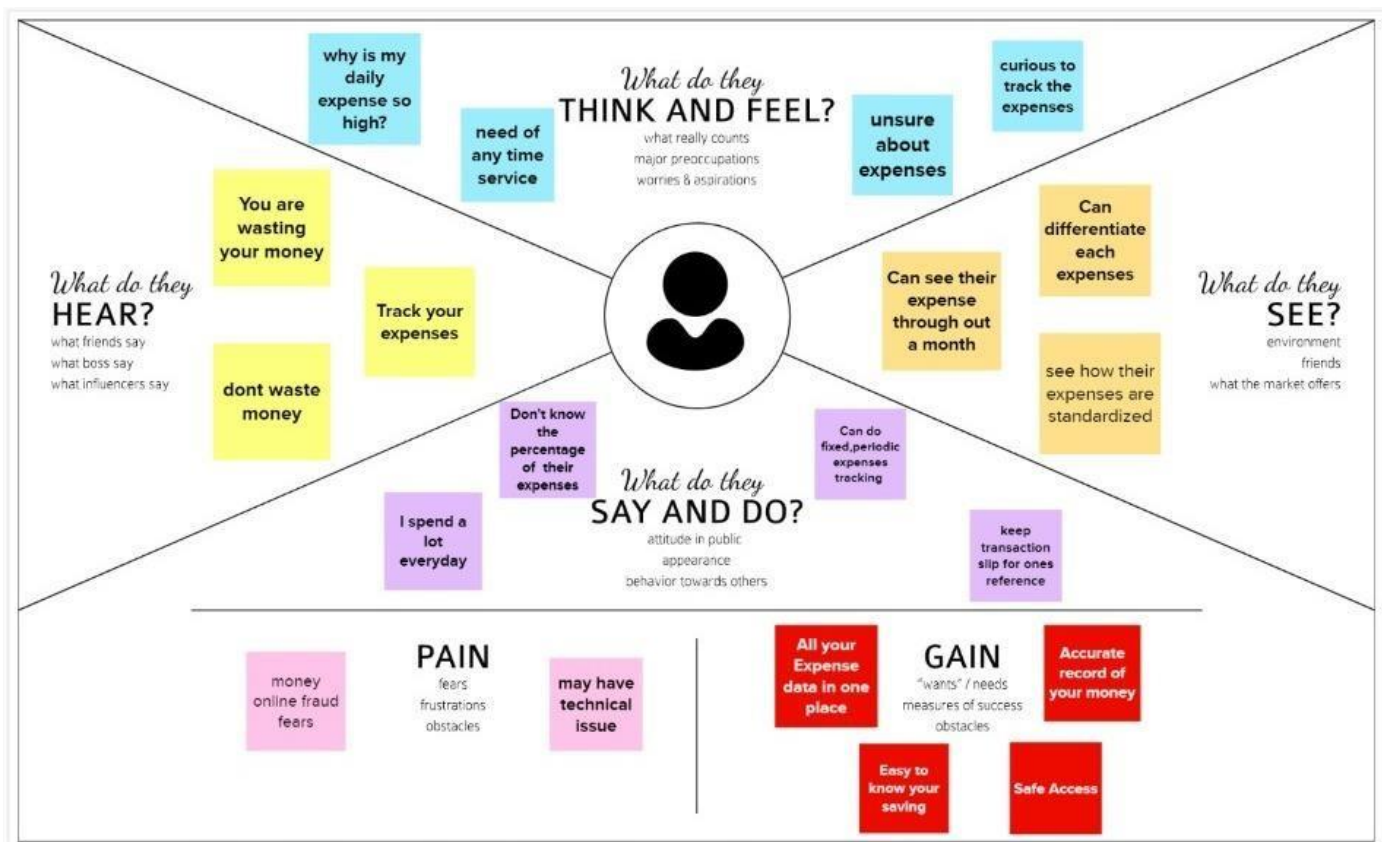

### 3.IDEATION & PROPOSED SOLUTION

#### 3.1 EMPATHY MAP CANVAS

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes.

It is a useful tool to helps teams better understand their users.Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

## 3.2 IDEATION & BRAINSTROMING

- ✓ Step-1: Team Gathering, Collaboration and Select the Problem Statement
- ✓ Step-2 : Brainstorm Idea Listing and Grouping
- ✓ Step-3: Idea Prioritization

Template

### Brainstorm & idea prioritization

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

 10 minutes to prepare  
 1 hour to collaborate  
 2-8 people recommended

#### Before you collaborate

A little bit of preparation goes a long way with this session. Here's what you need to do to get going.

 10 minutes

**Team gathering**

Define who should participate in the session and send an invite. Share relevant information or pre-work ahead.

**Set the goal**

Think about the problem you'll be focusing on solving in the brainstorming session.

**Learn how to use the facilitation tools**

Use the Facilitation Superpowers to run a happy and productive session.

[Open article](#) →

#### Define your problem statement

What problem are you trying to solve? Frame your problem as a How Might We statement. This will be the focus of your brainstorm.

 5 minutes

**Form**

How might we (your problem statement)?

#### Key rules of brainstorming

To run a smooth and productive session

 Stay in topic.	 Encourage wild ideas.
 Defer judgment.	 Listen to others.
 Go for volume.	 If possible, be visual.

### 3.3 PROPOSED SOLUTION

All people in the earning sector needs a way to manage their financial resources and track their expenditure, so that they can improve and monitor their spending habits. This makes them understand the importance of financial management and makes them better decisions in the future .They have an option to set a limit for the amount to be used for that particular month if the limit is exceeded the user will be notified with an email alert. The solution to this problem is, the people who gets regular payment scan able to track their payments and void unwanted expenses. If the limit is exceeded the user will be notified with an email alert.

S.No.	Parameter	Description
1.	Problem Statement	Many organizations have their own system to record their income and expenses. It is good habit for a person to record daily expenses and tracking the expenses throughout the month is essential. Thus, personal expense tracker application has made tracking and managing expenses a breeze.
2.	Novelty	This app efficiently works in providing financial management and helps in maintaining healthy and happier financial life fulfilling all needs and requirements as the user's comfort. This app provides a higher range of accuracy regarding real-time efficiency and security.
3.	Feasibility of Idea	User can easily maintain their untracked expenses and the app helps the user to record their expenditure. This app can achieve economic feasibility and security feasibility with at most care and support to the user
4.	Business Model	The application can be provided based on user required feature and the cost depends on the usage

5.	<b>Social Impact</b>	This application can create awareness among common people about finance and stuffs. This application also helps user to be financially responsible
6.	<b>Scalability of the Solution</b>	This application can handle large number of users and data with high performance and security at any given point of time.

### 3.4 PROBLEM SOLUTION FIT

Define CS, fit into CC	<b>1. CUSTOMER SEGMENT(S)</b> <ul style="list-style-type: none"><li>• Working Individuals</li><li>• Students</li><li>• Budget conscious consumers</li></ul>	<b>6. CUSTOMER CONSTRAINTS</b> <ul style="list-style-type: none"><li>• Internet Access</li><li>• Device (Smartphone) to access the application</li><li>• Data Privacy</li><li>• Cost of existing applications</li><li>• Trust</li></ul>	<b>5. AVAILABLE SOLUTIONS</b> <ul style="list-style-type: none"><li>• Expense Diary or Excel sheet</li></ul> <p>PROS : Have to make a note daily which helps to be constantly aware</p> <p>CONS : Inconvenient, takes a lot of time</p>						
	<b>2. JOBS-TO-BE-DONE / PROBLEMS</b> <ul style="list-style-type: none"><li>• To keep track of money lent or borrowed</li><li>• To keep track of daily transactions</li><li>• Alert when a threshold limit is reached</li></ul>	<b>9. PROBLEM ROOT CAUSE</b> <ul style="list-style-type: none"><li>• Reckless spendings</li><li>• Indecisive about the finances</li><li>• Procrastination</li><li>• Difficult to maintain a note of daily spendings (Traditional methods like diary)</li></ul>	<b>7. BEHAVIOUR</b> <ul style="list-style-type: none"><li>• Make a note of the expenses on a regular basis.</li><li>• Completely reduce spendings or spend all of the savings</li><li>• Make use of online tools to interpret monthly expense patterns</li></ul>						
Identify strong TR & EM	<b>3. TRIGGERS</b> <ul style="list-style-type: none"><li>• Excessive spending</li><li>• No money in case of emergency</li></ul>	<b>10. YOUR SOLUTION</b> <p>Creating an application to manage the expenses of an individual in an efficient and manageable manner, as compared to traditional methods</p>	<b>8. CHANNELS OF BEHAVIOUR</b> <p>ONLINE</p> <p>Maintain excel sheets and use visualizing tools</p>						
	<b>4. EMOTIONS</b> <table><tr><td>BEFORE</td><td>AFTER</td></tr><tr><td>• Anxious</td><td>• Confident</td></tr><tr><td>• Confused</td><td>• Composed</td></tr><tr><td>• Fear</td><td>• Calm</td></tr></table>		BEFORE	AFTER	• Anxious	• Confident	• Confused	• Composed	• Fear
BEFORE	AFTER								
• Anxious	• Confident								
• Confused	• Composed								
• Fear	• Calm								

## **4. REQUIREMENT ANALYSIS**

### **4.1 FUNCTIONAL REQUIREMENT**

Following are the functional requirements of the proposed solution.

- FR-1 User Registration ,Registration through Form Registration through Gmail
- Registration through linker IN
- FR-2 User Confirmation ,Confirmation via Email Confirmation via OTP
- FR-3 Tracking Expense Helpful insights about money management
- FR-4 Alert Message Give alert mail if the amount exceeds the budget limit
- FR-5 Category This application shall allow users to add categories of their expenses

### **4.2 NON-FUNCTIONAL REQUIREMENTS**

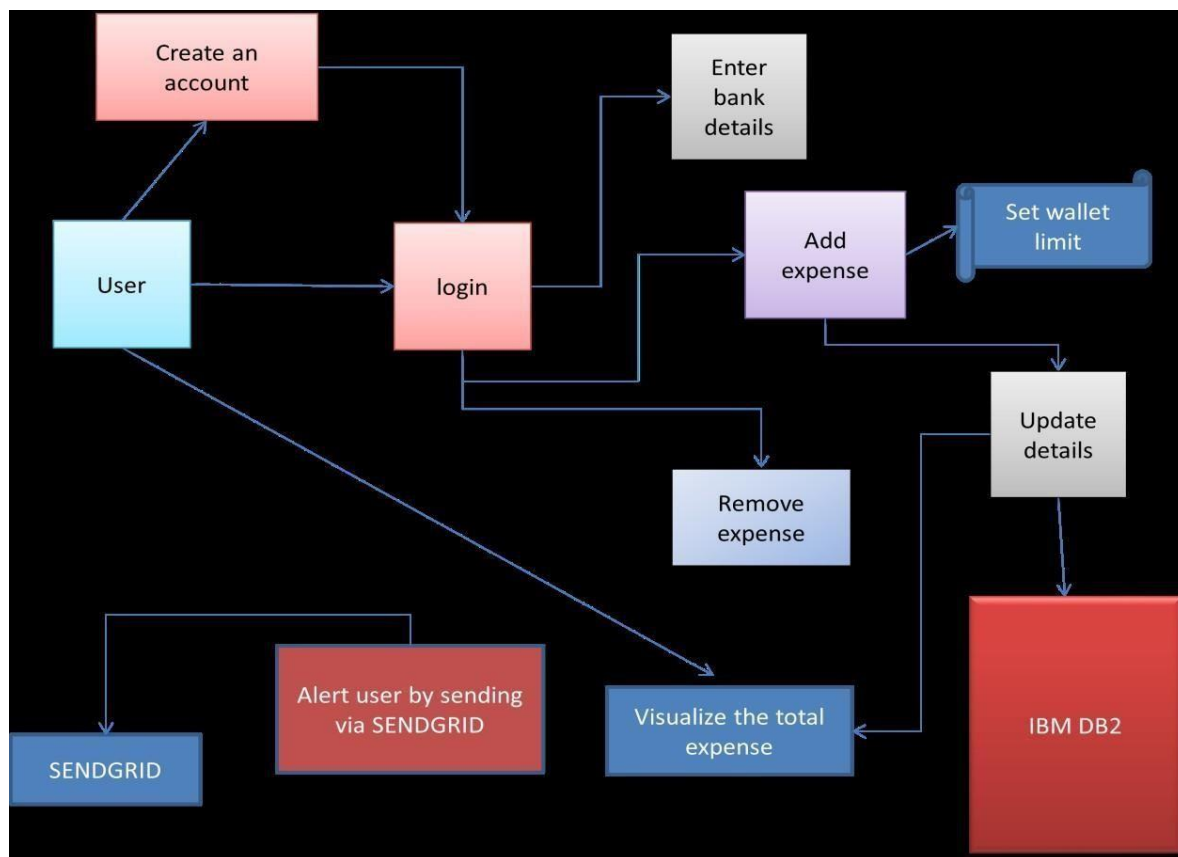

Following are the non-functional requirements of the proposed solution.

- NFR-1 Usability You will able to allocate money to different priorities and also help you to cut down on unnecessary spending
- NFR-2 Security More security of the customer data and bank account details.
- NFR-3 Reliability Used to manage his/her expense so that the user is the path of financial stability. It is categorized by week, month, and year and also helps to see more expenses made. Helps to define their own categories.
- NFR-4 Performance The types of expense are categories along with an option .Throughput of the system is increased due to light weight database support.
- NFR-5 Availability Able to track business expense and monitor important for maintaining healthy cash flow.
- .NFR-6 Scalability The ability to appropriately handle increasing demands.

## 5. PROJECT DESING

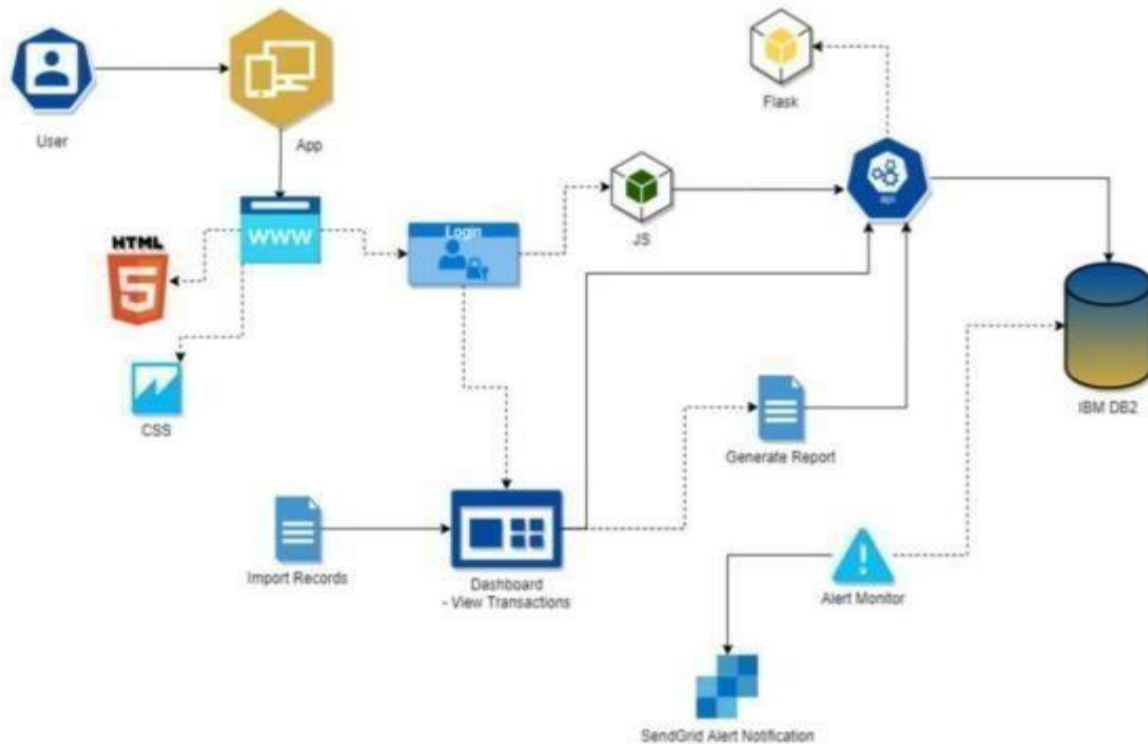

### 5.1 DATA FLOW DIAGRAM

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows with in a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is store.

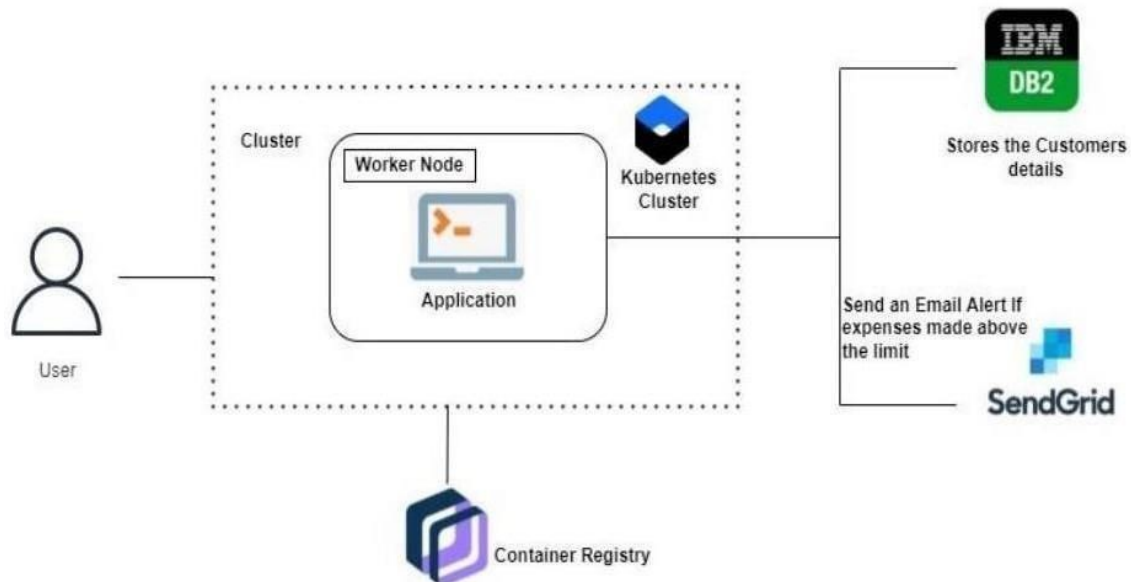

## 5.2 SOLUTION & TECHNICAL ARCHIECTURE

### Solution Architecture:

### Technical Architecture:

## 5.3 USER STORIES

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer (Mobile user)	Registration	USN-1	As a user, I can register for the application by entering my email, password, and confirming my password.	I can access my account / dashboard	High	Sprint-1
		USN-2	As a user, I will receive confirmation email once I have registered for the application	I can receive confirmation email & click confirm	High	Sprint-1
		USN-3	As a user, I can register for the application through Facebook	I can register & access the dashboard with Facebook Login	Low	Sprint-2
		USN-4	As a user, I can register for the application through Gmail	I can access <u>my</u> account through Gmail login	Medium	Sprint-1
	Login	USN-5	As a user, I can log into the application by entering email & password	I can receive login confirmation and login credentials	High	Sprint-1

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
	Dashboard	USN-6	As a user, can access dashboard my to manage <u>my</u> expenses	Overall credit outlook	Low	Sprint-1
Customer (Web user)	Web user	USN-7	As a customer, can access the application using the <u>web based</u> platform also	Can have separate web page form	Medium	Sprint-1
Customer Care Executive	Expense management		As a customer care executive, periodically update and maintains expense application	Can have the login access when Admin permits	High	Sprint-1
Administrator	Creates and makes the application into use		As <u>a</u> administrator, is responsible for every expense count management	I can have the direct access to the application	High	Sprint-1

## 6. PROJECT PLANNING & SCHEDULING

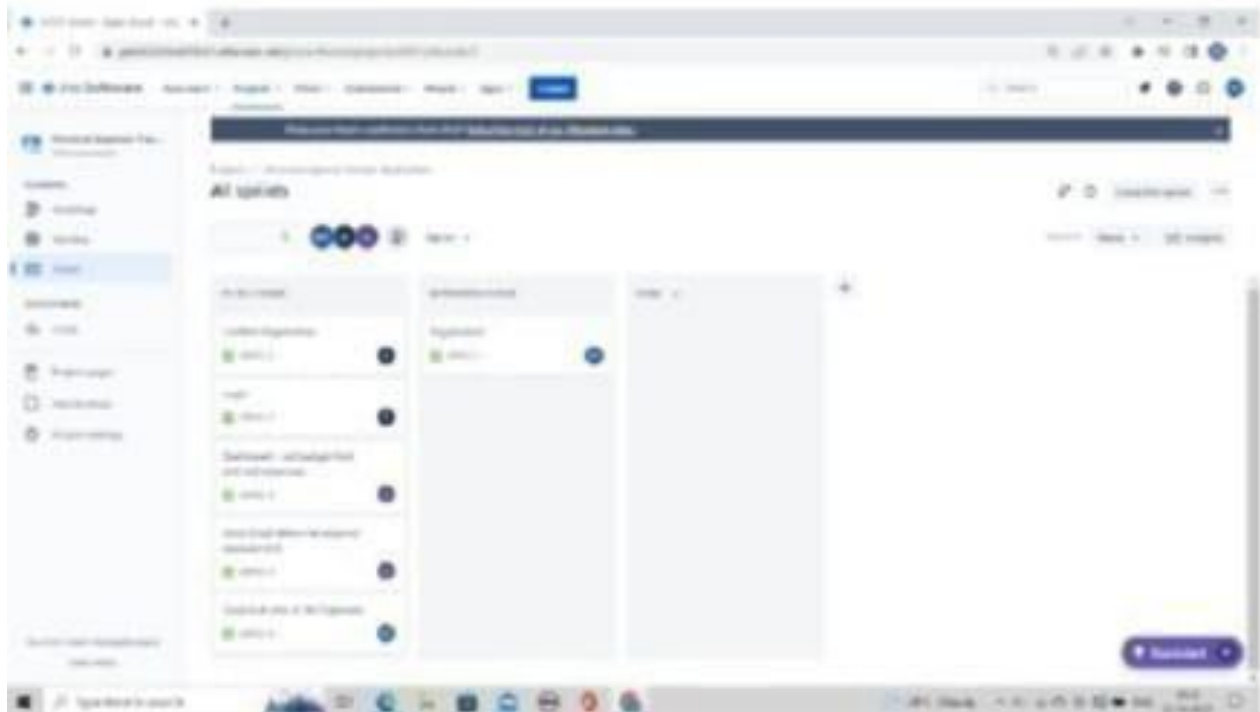

### 6.1 SPRINT PLANNING & ESTIMATION

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority
Sprint 1	Registration	USN-1	As a user, I can register for the application by entering my email, password, and confirming my password.	2	High
		USN-2	As a user, I will receive confirmation email once I have registered for the application	1	High
		USN-3	As a user, I can register for the application through the gmail	1	Medium
	Login	USN-4	As a user, I can log into the application by entering email & password	1	High
	Dashboard	USN-5	Logging in takes to the dashboard for the logged user.	2	High
<i>Bug fixes, routine checks and improvisation by everyone in the team *Intended bugs only</i>					
Sprint 2	Workspace	USN-1	Workspace for personal expense tracking	2	High
	Charts	USN-2	Creating various graphs and statistics of customer's data	1	Medium
	Connecting to IBM DB2	USN-3	Linking database with dashboard	2	High
Sprint-3		USN-1	Wrapping up the server side works of frontend	1	Medium
	Watson Assistant	USN-2	Creating Chatbot for expense tracking and for clarifying user's query	1	Medium
	SendGrid	USN-3	Using SendGrid to send mail to the user about their expenses	1	Low
		USN-4	Integrating both frontend and backend	2	High
<i>Bug fixes, routine checks and improvisation by everyone in the team *Intended bugs only</i>					
Sprint-4	Docker	USN-1	Creating image of website using docker/	2	High
	Cloud Registry	USN-2	Uploading docker image to IBM Cloud registry	2	High
	Kubernetes	USN-3	Create container using the docker image and hosting the site	2	High
	Exposing	USN-4	Exposing IP/Ports for the site	2	High

## 6.2 SPRINT DELIVERY SCHEDULE

## 6.3 REPORTS FROM JIRA

## 7. CODING & SOLUTIONING

### 7.1 FEATURE 1

We have added the data visualization on methods for expenditure. The pie chart have been used to represent the monthly expenses. The pie chart is a pictorial representation of data that makes it possible to visualize the relationships between the parts and the whole of a variable. For example, it is possible to understand the industry count or percentage of a variable level from the division by areas or sectors. The recommended use for pie charts is two- dimensional, as three-dimensional use can be confusing.

## 7.2 FEATURES 2

Email notifications will be sent to the users once they cross the expenditure limit through send grid mail system. Most notifications are transactional, meaning a recipient's action or account activity triggers them. But some notifications are marketing related, encouraging the recipient to take a specific action. Ecommerce product notifications inform recipients about new products or discounts. Plus, unlike general marketing emails, these are highly personalized and focus on a single product. For example, if a customer views an item on your website and that item goes on sale, you can send the customer a notification to let them know this is the best time to buy. Users can also opt into receiving notifications when an out-of-stock item is back in stock.

Notification emails tend to perform well because the content is highly relevant to the recipient. But the only way for the recipient to know this is if you state the content clearly in the subject line. For example, the subject line "New Sign-in to Your Account" gets straight to the point, letting the user know why you sent this notification.

### Sendemail.py

```
import smtplib
import sendgrid as sg
import os
from sendgrid import SendGridAPIClient
from sendgrid.helpers.mail import Mail, Email, To, Content
SUBJECT = "personal expense tracker"
s = smtplib.SMTP('smtp.gmail.com', 587)

def sendmail(TEXT,email):
    from_email = Email("kanishkan@gmail.com")
    to_email = To(email)
    subject = "Sending with SendGrid is Fun"
    content = Content("text/plain",TEXT)
    mail = Mail(from_email, to_email, subject, content)
    try:
        sg=SendGridAPIClient('SG.3wVvuDLTQ-
aoSvEqQ8xy7w.2Mp38QJmhoG_p09E3x7HA20AGRCx9TD7QTenuEHfp9k')
        response = sg.send(mail)
        print(response.status_code)
```

```
print(response.body)
print(response.headers)
except Exception as e:
    print(e)
```

## 7.3 DATABASE SCHEMA

### Tables :

#### 1) ADMIN

## 8. TESTING

### 8.1 TEST CASES

Test Case ID	Purpose	TestCases	Result
TC1	Authentication	password with length less than 4 characters	password cannot be less than 4 characters
TC2	Authentication	User name with length less than 2 characters	User name cannot be less than 2 characters
TC3	Authentication	Valid user name with minimum 2 characters	User name accepter
TC4	Authentication	User name is blank	User name cannot be less than 2 characters
TC5	Authentication	Password field blank	User password cannot be empty
TC6	Authentication	Minimum 4 characters valid password	Password accepted
TC7	Authentication	Password and Confirm password did not match	Please enter same password
TC8	Authentication	Confirm Password field bland	Please enter same password

## 8.2 USER ACCEPTANCE TESTING

Test Case ID	Test Case Description
TC_001	Verify if user is able to order single product.
TC_002	Verify if user is able to order multiple products.
TC_003	Verify if user can apply single or multiple filters
TC_004	Verify if user can apply different sort by
TC_005	Verify if user is able to pay by Master Card
TC_006	Verify if user is able to pay by Debit Card
TC_007	Verify if user is able to pay fully by reward points
TC_008	Verify if user is able to pay partially by reward points

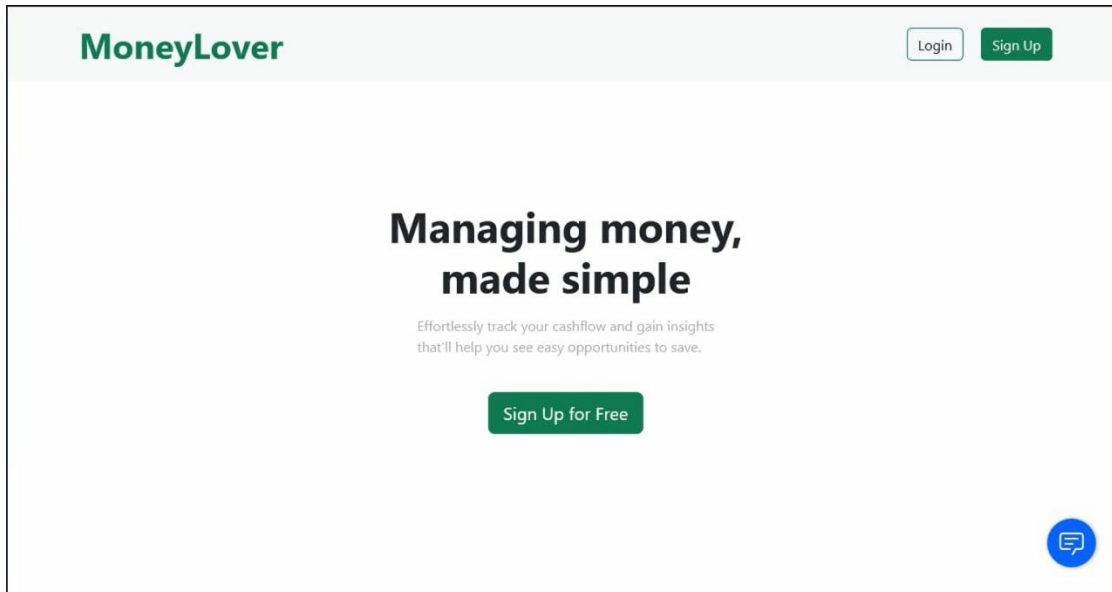

## 9. RESULTS

### 9.1 PERFORMANCE METRICS

- Tracking income and expenses: Monitoring the income and tracking all expenditures (through bank accounts, mobile wallets, and credit & debit cards).
- Transaction Receipts: Capture and organize your payment receipts to keep track of your expenditure.
- Organizing Taxes: Import your documents to the expense tracking app, and it will streamline your income and expenses under the appropriate tax categories.

- Payments & Invoices: Accept and pay from credit cards, debit cards, net banking, mobile wallets, and bank transfers, and track the status of your invoices and bills in the mobile app itself. Also, the tracking app sends reminders for payments and automatically matches the payments with invoices.
- Reports: The expense tracking app generates and sends reports to give a detailed insight about profits, losses, budgets, income, balance sheets, etc.,
- E-commerce integration: Integrate your expense tracking app with your eCommerce store and track your sales through payments received via multiple payment methods.
- Vendors and Contractors: Manage and track all the payments to the vendors and contractors added to the mobile app.
- Access control: Increase your team productivity by providing access control to particular users through custom permissions.
- Track Projects: Determine project profitability by tracking labor costs, payroll, expenses, etc., of your ongoing project.
- Inventory tracking: An expense tracking app can do it all. Right from tracking products or the cost of goods, sending alert notifications when the product is running out of stock or the product is not selling, to purchase orders.
- In-depth insights and analytics: Provides in-built tools to generate reports with easy-to-understand visuals and graphics to gain insights about the performance of your business.
- Recurrent Expenses: Rely on your budgeting app to track, streamline, and automate all the recurrent expenses and remind you on a timely basis.

## 10. ADVANTAGES AND DISADVANTAGES

### 10.1 ADVANTAGES

- **Daily Expense Tracker**

An expense manager consolidates all incoming and outgoing transactions, so that you're not found organizing data separately.

- **Keep an Eye on your Finances**

Request for a customized report of your spending & expenses and keep a close eye on your everyday money.

- **Personal Finance Management**

An Expense Manager makes your personal money management totally effortless & track your expenses & spend according to the set up monthly budget.

- **Money Saving & Growth**

It's quite easy to save money using an expense manager. The tracker observes your expenses so that you're aware of what's being spent & take note for future.

- **Expenditure Summary**

Extract daily, weekly & monthly summary of your spends to line up with your budget goals & achievements.

- **Home Credit Expense Manager** uses new era technology to automatically categorize & provide a 360 degree view of all your income & expenses. It works like a single passbook for all the transactions of money. It's a brilliant step towards futuristic approach in your financial planning & strategy. It's time to march in a forward looking way so that every technology is well-utilized, keeping manual efforts at bay & grow your wealth.

## 10.2 DISADVANTAGES

- There are many misconceptions about budgeting. Beyond the mindset shift, budgeting isn't always easy for those who are just starting or haven't done it consistently. The pros outweigh the cons, but there may be some disadvantages of budgeting as well.
- Your information is less secure, and probably being used and sold. If the service is free, then the product is you. Mint.com, like other financial apps, is a free service.
- They have to pay their bills somehow, so regardless of what their privacy policy may or may not say, just assume that your spending history and trends are going to be recorded and analyzed, by someone, somewhere.
- Now, you shouldn't have to worry about credit card fraud or identity theft, these companies are large enough and secure enough that you'll never have to worry about something like that. Just recognize that your information, most likely anonymous, will be used and potentially even sold. Personally, I have no problem with that, but if you do, then make sure you avoid these types of services.

## 11. CONCLUSION

From this project, we are able to manage and keep tracking the daily expenses as well as income. While making this project, we gained a lot of experience of working as a team. We discovered various predicted and unpredicted problems and we enjoyed a lot solving them as a team. We adopted things like video tutorials, text tutorials, internet and learning materials to make our project complete. I personally consider the activity of budgeting and expense tracking as one of those things which has profound benefits in long term. The benefits are so huge that it may lead to financial independence. People who've practiced yoga for an extended period of time, will vouch for its benefits on physical and mental health. "Budgeting and expense tracking" can have similar positive impact on *ones* financial health.

## 12. FUTURE SCOPE

- Achieve your business goals with a tailored mobile app that perfectly fits your business.
- Scale-up at the pace your business is growing.
- Deliver an outstanding customer experience through additional control over the app.
- Control the security of your business and customer data.
- Open direct marketing channels with no extra costs with methods such as push notifications.
- Boost the productivity of all the processes within the organization.
- Increase efficiency and customer satisfaction with an app aligned to their needs.
- Seamlessly integrate with existing infrastructure.
- Ability to provide valuable insights.
- Optimize sales processes to generate more revenue through enhanced data collection.
